

PROJECT PAARAL

Platform for Analyzing Access and Resource Allocation in Learning

Prepared by: Sebastian Felipe Bundoc · Senior Data Scientist · Education Center for AI Research
Paula Joy Martinez · Data Scientist · Education Center for AI Research

Agenda: Working Session with GASS for PAARAL's Roadmap and Pilot Deployment

Date: 05 May 2026

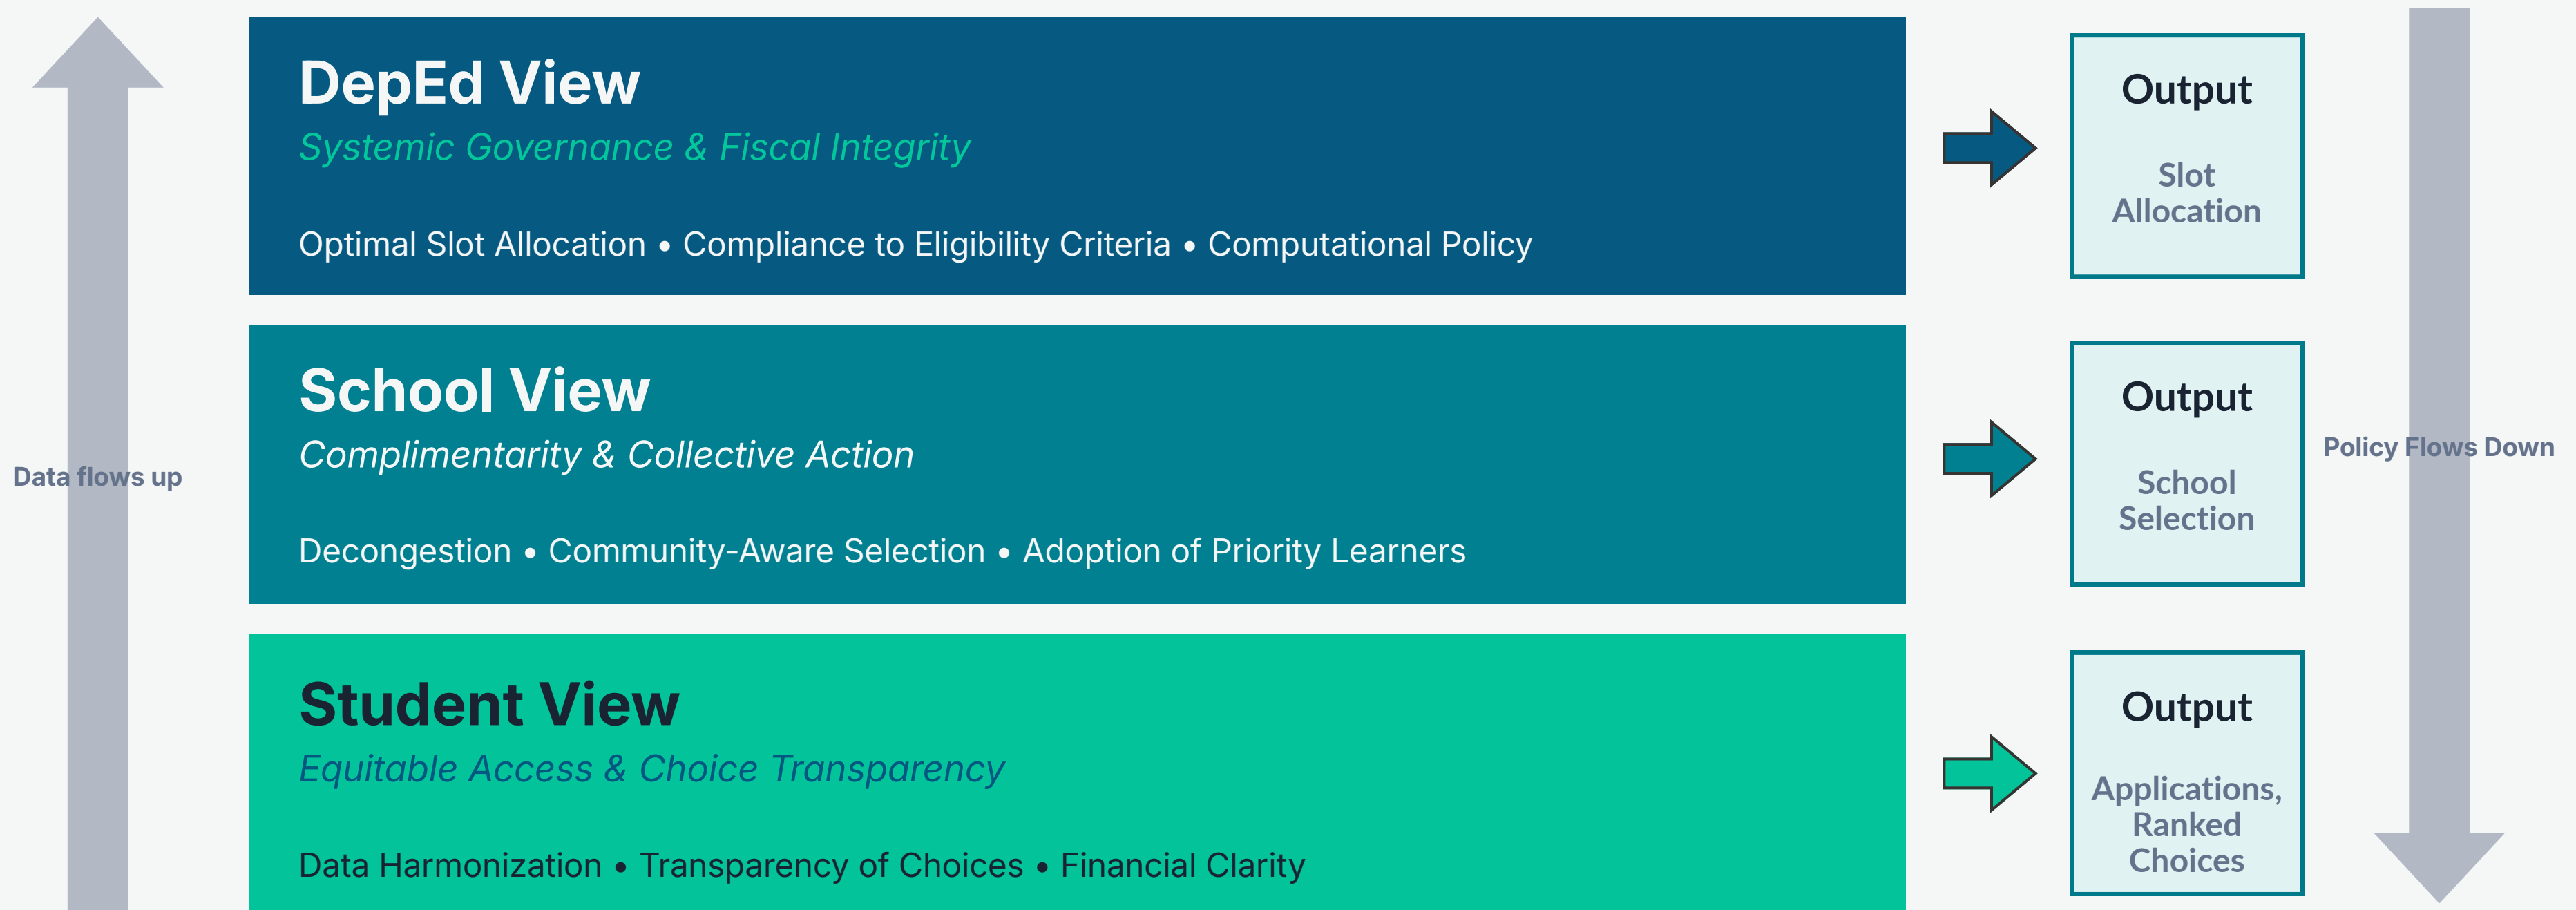

DepEd ORDER
No. , s. 2026

**REVISED GUIDELINES ON THE IMPLEMENTATION OF EXPANDED
GOVERNMENT ASSISTANCE TO STUDENTS AND TEACHERS IN PRIVATE
EDUCATION (E-GASTPE) IN THE DEPARTMENT OF EDUCATION**

PAARAL is envisioned to be the **end-to-end, tangible realization** of the revised guidelines on the implementation of E-GASTPE, particularly for the Education Service Contracting program.

The Integrated Ecosystem of PAARAL

Each view solves a distinct problem using rigorous computational methods

The Questions We Answer

Each view answers questions that were previously unanswerable with fragmented data.

Student View

1. Which schools can my child attend?
 - Not just what schools exist, but which ones are geographically reachable, affordable after subsidies, and have available slots
2. How do we guarantee our child gets a seat somewhere?
 - The system enforces a public school backup.
3. Is this school too far for daily commute?
 - Distance + estimated commute time shown upfront

School View

1. Which high-priority applicants in your pool were passed over by nearby finalized schools, and should your school adopt them?
2. How many of your Category B selections come from suspect origin public schools, and what is your school's decongestion contribution this cycle?
3. When your final selection deviates from your raw applicant pool, is every change accounted for and traceable?

DepEd Planning View

1. How do we reduce congestion without disrupting thousands of families?
 - Find the assignment that achieves target decongestion while respecting choice preferences.
2. What happens if we change the subsidy amount?
 - Counterfactual simulation
 - Model predicts enrollment shifts, slot utilization, residual congestion
3. Where should we allocate new ESC slots?
 - Optimization identifies which school pairs have the largest marginal decongestion potential.
4. If we shift students to their 2nd or 3rd choice, how is congestion affected?
 - "Moving 200 students to Rank 2 avoids 500 students in 50:1 classrooms"

PAARAL Roadmap (Detailed)

What is our timeline?

Phase	Period	Owner	Key Activities	Milestone Signal
Phase 0: Mockup Finalization and Sign-off	May – June 2026	E-CAIR	- Complete mockups and demo to GASS and PEAC. - Jointly define pilot scope with GASS and PEAC: target SDOs, school count, learner cohort, etc. - Produce budget estimates	GASS and PEAC confirms pilot scope and approves the proposed UI/UX and data to be collected
Phase 1: Development of Student View + School View	July – Sep 2026	E-CAIR	- Data ingestion of school and slot data from GASS and PEAC - Coordinate with ICTS and Legal for the LRN verification in the Student View	Functional end-to-end flow: student submits → school sees application → school accepts/rejects
		GASS	Coordinate with ICTS and Legal for the LRN verification in the Student View	

PAARAL Roadmap (Detailed)

What is our timeline?

Phase	Period	Owner	Key Activities	Milestone Signal
Phase 2: Internal Pilot	Oct 2026	E-CAIR	• Deploy to E-CAIR team, select GASS staff, invited school admin contacts • End-to-end testing with pilot school data • Collect usability feedback • Rapid iterations	Internal sign-off that system is ready for external pilot. Go/no-go decision.
		GASS	• Finalize pilot school list, learner eligibility criteria, communication plan • Stress-test the pilot	

PAARAL Roadmap (Detailed)

What is our timeline?

Phase	Period	Owner	Key Activities	Milestone Signal
Phase 3: Pilot Preparation	Nov-Dec 2026	E-CAIR	- School admin training (live and recorded walkthroughs) - Set up production environment - Monitoring dashboard for GASS (e.g., submission count, participation rate)	Pilot schools confirmed and onboarded; students notified; system in production
		GASS	- Onboard pilot schools - Get real slot data - Create school admin accounts - Student-facing outreach (DepEd information drive to pilot learners)	

PAARAL Roadmap (Detailed)

What is our timeline?

Phase	Period	Owner	Key Activities	Milestone Signal
Phase 4: January 2027 Pilot	Jan – Mar 2027	GASS (Lead), E-CAIR (Support)	- Real-time monitoring by E-CAIR + GASS - E-CAIR on standby for tech support - Deploy usability survey	Pilot is complete. Data collected for sustainability plan and national rollout roadmap.
Phase 5A: Infrastructure Turnover + Sustainability Plan	Mar – Dec 2027	E-CAIR to GASS/DepEd	- E-CAIR produces sustainability plan (e.g., system architecture, operational runbook, budget estimates) - DepEd ICTS or contracted vendor provisions national-level infrastructure - Codebase, data, and domain transferred to DepEd ownership - E-CAIR provides knowledge transfer to DepEd/GASS	Full ownership transfer complete. National rollout planning underway.

PAARAL Roadmap (Detailed)

What is our timeline?

Phase	Period	Owner	Key Activities	Milestone Signal
Phase 5B: Infrastucture Turnover + Sustainability Plan	Apr – Aug 2027	E-CAIR (Lead), GASS (Support)	Development of DepEd Planning view	DepEd planning view
Phase 6: National Rollout	2028 onward	DepEd / GASS	- National student view rollout - Full school portal - DepEd planning view in production - BigQuery analytics pipeline	Full national deployment. PAARAL operational at scale.
